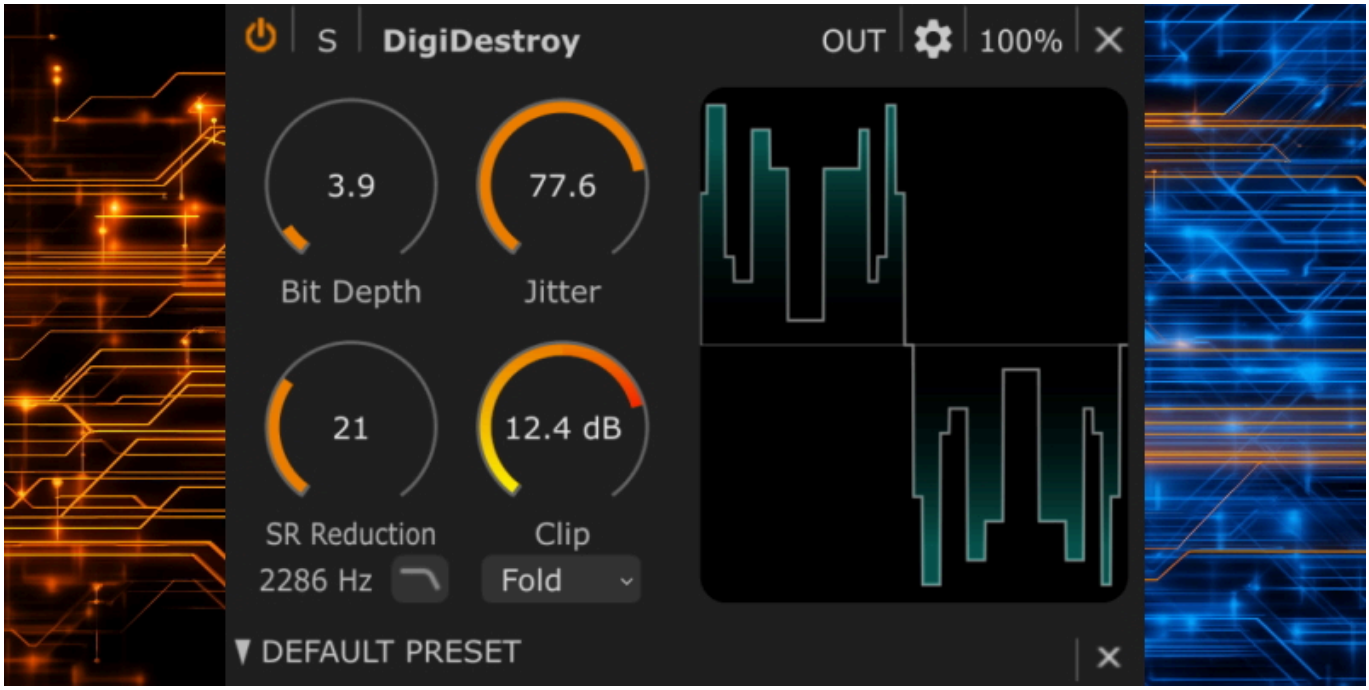
HOFA SYSTEM DigiDestroy



HOFA-Plugins introduces SYSTEM DigiDestroy, the newest addition to the SYSTEM plugin series. Crafted to deliver raw, gritty, and digital sonic textures, DigiDestroy is a versatile bitcrusher plugin designed for producers, sound designers, and audio engineers seeking vintage flair, experimental transitions, and creatively destructive sound effects.

SYSTEM DigiDestroy's features include:

- Bitcrusher: Adjustable bit depth and sample rate reduction parameters allow users to generate digital artefacts, from subtle retro vibes to intense digital distortion.
- Anti-aliasing Filter: The integrated high-cut filter reduces aliasing artifacts.
- Jitter: Introduces random fluctuations in sampling intervals, enhancing the sound with digital noise, chaos, and a lively, unpredictable quality.
- Digital Clipper: Offers three distinct clipping modes.
- Hard: Classic digital clipping for a direct and powerful distortion.
- Fold: Signal folding creates complex, metallic distortion.
- Wrap: Delivers aggressive distortion with unpredictable harmonic content.

SYSTEM DigiDestroy offers both a freeware version with core functionalities and a full version unlocking all features, including jitter adjustment and all three clipping modes. DigiDestroy is a part of the HOFA SYSTEM modular plugin platform which offers a flexible and powerful environment for audio processing. With over 30 high-quality effect modules – including EQs, compressors, reverbs and modulation – users can create custom signal chains tailored to their workflow. Unique features
