- 20 new Premium Tone Models for TONEX and TONEX SE

TONEX ONE

- A selection of 20 expertly crafted presets from the list above
- Easy to explore and customize with the new TONEX Editor

For the TONEX Pedal, the first 30 banks deliver an expansive range of amp & cab tones, covering everything from dynamic cleans to brutal high-gain distortion. Each bank features legendary amplifiers paired with cabs such as a Marshall 1960, ENGL E412V, EVH 412ST and MESA Boogie 4x12 4FB, ensuring a diverse tonal palette. For some extremely high-gain tones, these amps have been boosted with classic pedals like the Ibanez TS9, MXR Timmy, ProCo RAT, and more, pushing them into new sonic territories.

The following 5 banks of 15 presets explore the depth of TONEX's latest effects. There's everything from the rich tremolo on a tweed amp to the surf tones of the new Spring 4 reverb. Users can also enjoy warm tape slapback with dotted 8th delays or push boundaries with LCR delay configurations for immersive, stereo-spanning echoes. Further, presets include iconic flanger sweeps, dynamic modulation, expansive chorus, stereo panning, and ambient reverbs to create cinematic soundscapes.

The TONEX Pedal's A, B, and C footswitches make navigating these presets easy. Slot A delivers clean, smooth tones, Slot B adds crunch and drive, and Slot C pushes into high-gain or lead territory.. Five dedicated amp-only banks provide a rich foundation of tones for players looking to integrate external IRs or run directly into a power amp. These amp-only captures span clean, drive, and high-gain categories, offering flexibility to sculpt the sound further with IRs or a real cab.

TONEX Pedals are ideal for adding classic effects to any pedalboard. The next 5 banks focus on stompbox captures, showcasing 15 legendary overdrive, distortion, and fuzz pedals. This collection includes iconic models based on the Fulltone Full-Drive 2, Marshall DriveMaster, Maxon OD808, Klon Centaur, ProCo RAT, and more.

The last 5 banks are reserved for bass players, including a selection of amp & cab Tone Models alongside a few iconic pedals. Specifically, there are Tone Models based on the Ampeg SVT-2 PRO, Gallien-Krueger 800RB, and Aguilar DB750, alongside essential bass pedals based on the Tech21 SansAmp, Darkglass B7K and EHX Big Muff. Whether it's warm vintage thump, modern punch, or extreme grit, these presets ensure that bassists have the depth, clarity and power they need for any playing style.
