IK Multimedia T-RackS 6 Prism Reverb

IK Multimedia, an innovator in music software and hardware, announces the release of T-RackS 6 Prism Reverb, an effects module that is more than just another shimmer reverb. A playground for sonic exploration, Prism Reverb was developed for sound designers, producers, and guitarists to push beyond "beautiful washes," allowing them to shape infinite, evolving textures with depth and creative freedom.

Traditional shimmer reverbs end at beautiful; T-Racks 6 Prism Reverb transcends this by delving into the lush, the infinite, and the experimental. Every control is designed to inspire, offering tools to create reverb textures that breathe, dance, and evolve in ways no other reverb can.

T-RackS 6 Prism Reverb Overview:

- A 4-module plug-in for creating beautiful and dramatic reverb effects Innovative control over Reverb, Modulation, Pitch-shifting and Feedback
- Modulation and Pitch-shifting modules allow independent L/R adjustments
- Works as a standalone plug-in or inside the T-RackS 6 plug-in shell
- Includes artist presets for Bass, Guitar, Keys, FX, Voice and more

At the center of T-RackS 6 Prism Reverb is the reverb module, crafting the initial reflections that define the sound. With Size and Diffusion controls, users can shape anything from tight, focused spaces to vast, ambient environments - the essential foundation for the evolving effect chain. Integrated into the reverb stage, the modulation section adds life and movement to the tail. Depth, LFO Rate, and optional randomization provide expressive control, while independent channel modulation generates rich, asymmetrical spatial textures that evolve with the music.

Two independent pitch shifters provide a ±2-octave range with ultra-fine tuning down to 1/100th of a semitone. This module features dedicated level and pan

controls, allowing users to create immersive, spatial pitch effects - ideal for shimmering textures or subtle tonal shifts. The feedback engine controls the shimmer's intensity and tone, with frequency-specific shaping for both highs and lows. The FB PITCH switch toggles pitch-shifting in or out of the loop, while FLIP switches stereo channels on each pass, enhancing spatial depth and seamlessly blending complex effects. With T-RackS 6 Prism Reverb, sound designers can craft customized, evolving reverbs for film, games, and experimental music, shaping textures that breathe and transform over time, and creating a sense of depth and immersion.

Producers can introduce shimmering movement and depth to their tracks without needing to stack multiple effects, enriching their mixes and making them more dynamic. Guitarists can infuse cinematic, shoegaze-inspired textures directly into their digital audio workstations (DAWs), offering flexibility and control that traditional pedals cannot match. T-RackS 6 now features 63 world-class mixing and mastering processors that can be used individually in any DAW or within the all-in-one T-RackS plug-in or standalone Mastering Console.

From studio must-have compressors, EQs, and channel strips, all leveraging IK's industry-leading analog modeling technology, to hall, room, plate, and spring reverbs based on some of the most iconic studios of all time, as well as cutting-edge digital processors and organic all-in-one units, T-RackS 6 offers every tool music producers need to get the job done and ready for broadcast. Like all T-RackS 6 plug-in processors, Prism Reverb is designed to be fully compatible with both Mac and Windows platforms. It supports all major plug-in formats: Audio Units, VST 3, and AAX.

T-RackS 6 Prism Reverb is now available from the IK Multimedia online store and through IK authorized dealers worldwide as a single product or part of a bundle:

- T-RackS 6 Prism Reverb - Free for registered owners of T-RackS 6 MAX or Total Studio 5 MAX via the IK Product Manager.
- T-RackS 6 MAX with Prism Reverb - (On sale for a limited time) - 62 plug-ins, including T-RackS Plug-in and Mastering Console.
- Total Studio 5 MAX with Prism Reverb - (Special MAXgrade pricing) - Over 145 of IK's award-winning music creation titles.
