IK Multimedia TONEX 2 Player

IK Multimedia today releases TONEX 2 Player version 2.1, the official release following its public beta period, together with TONEX Board firmware 1.1.0. Players can now build complete TONEX Board Rigs directly in software, share them through ToneNET, and take the exact same sound to TONEX Board for recording, rehearsal, and the stage. Firmware 1.1.0 also expands TONEX Board with USB audio, USB MIDI, and a broad range of performance and quality-of-life enhancements.

TONEX 2 Player version 2.1 introduces TONEX Rig, an optional paid add-on that brings the complete TONEX Board rig-building experience to software. Powered by the TONEX Board Engine, it supports a flexible 12-block signal chain, dual paths, Split and Mix routing, stereo operation, and up to four Tone Models in a single preset.

TONEX Rig includes 76 studio-quality effects at launch, derived from the acclaimed AmpliTube collection and built for complete guitar and bass rig creation. Players can create, share, discover, and download complete TONEX Board Rigs through ToneNET, then transfer the exact same rig to TONEX Board for recording, rehearsal, and live performance.

Key Features:

- One complete rig, from studio to stage - Build detailed guitar and bass rigs in TONEX 2 Player, then take the exact same preset to TONEX Board for rehearsal, recording, and live performance
- 76 studio-quality effects - Shape sounds with drives, fuzz, dynamics, modulation, pitch, EQ, filters, delays, reverbs, and utility effects derived from AmpliTube
- More effects, no extra cost - New effects are planned for as early as late October, with further additions to follow at no additional cost for TONEX Rig owners
- Complete rig control - Use a flexible 12-block signal chain, dual paths, Split and Mix routing, stereo operation, and up to four Tone Models per preset
- Share complete rigs - Use TONEX Rig to create, share, discover, and download complete TONEX Board Rigs through ToneNET
- A better TONEX Board experience - Firmware 1.1.0 adds USB audio, USB

MIDI, improved touchscreen responsiveness, Scene control enhancements, new effects at no additional cost, and more

TONEX 2 Player version 2.1 makes software the center of the complete TONEX workflow. TONEX Rig brings the creative power of TONEX Board directly to Mac and PC, enabling players to create a complete guitar or bass rig in software for recording and rehearsal.

Up to four Tone Models can be placed across two flexible signal paths, allowing everything from straightforward amp-and-effects setups to layered dual-amp, stereo, wet/dry, and parallel rigs. Stomp captures can be placed before amp Tone Models, different amps and cabinets can be combined, and every element can be saved together as a complete TONEX Board Rig.

The included effects collection provides 76 studio-quality effects at launch across drives and fuzz, modulation, dynamics, pitch, EQ, filters, delays, reverbs, and utility tools. More effects are planned to begin arriving as early as late October, with further releases to follow. TONEX Rig owners will receive these and future effects at no additional cost.

Complete TONEX Board Rigs can be uploaded, downloaded, and shared through ToneNET, making it simple to move from sound design to collaboration. Players can create a rig in TONEX 2 Player, transfer it to TONEX Board, and take the same sound from the studio to rehearsal and the stage. TONEX 2 Player version 2.1 remains a free update for all TONEX users. TONEX Rig is included for registered TONEX Board owners and is also available as an optional add-on for eligible paid TONEX users, or $/€149.99 (tax excluded) for TONEX CS users. Available now as a free update, TONEX Board Firmware 1.1.0 expands connectivity while making the Board experience faster, smoother, and more flexible.

The update adds USB audio with 4 inputs and 2 outputs. Inputs include two effected audio channels and two DI audio channels, while the assignable stereo output can be routed on-device to the physical outputs. USB MIDI support expands integration with USB MIDI controllers, computer-based rigs, and recording setups.

Firmware 1.1.0 also delivers a range of workflow and performance improvements:

- More responsive control - Enhanced touchscreen responsiveness
- Optimized performance - Reduced CPU load for CPU-intensive models, with improved audio bypass behavior during Scene changes
- Expanded Scene control - Input, Output, Split, and Mix parameters are now assignable to scenes
- Global Preset Spillover Bypass - New settings preference controls spillover behavior between compatible presets
- Faster workflow - Double-tap bypass for gear in the signal chain and Sync On as the default for time-based effects
- Faster Tuner access - Access the Tuner from the Settings panel or, in Scene
