LEWITT Space Replicator 2.0 Update

LEWITT's Space Replicator, a plug-in for mixing in virtual studios and mix translation checks, has received a big update. In response to community feedback, Space Replicator now offers the ability to tailor the listening experience precisely to your individual needs, including adjustable ambience, EQ, and more. The update also gives access to the ideal mixing room designed according to the official standards of the European Broadcasting Union, a new Analytic space, and new headphone simulations, including common mixing headphone models.

"LEWITT has always been a user-focused company. We treat your feedback like a treasure and are happy to implement so many requested features in the 2.0 update. With the new customization options, you can now really make Space Replicator your own." says Moritz Lochner, Head of Product Management.

Space Replicator 2.0 - What's New

- Standalone functionality - no DAW required
- Overall audio quality and performance update and zero-latency performance
- Shape each room to your taste with per-room EQ and adjustable room ambience
- Tune the overall output sound with the new output EQ
- Blend in exactly as much headphone compensation as you want
- Compensate for uneven headphones or hearing with the balance slider
