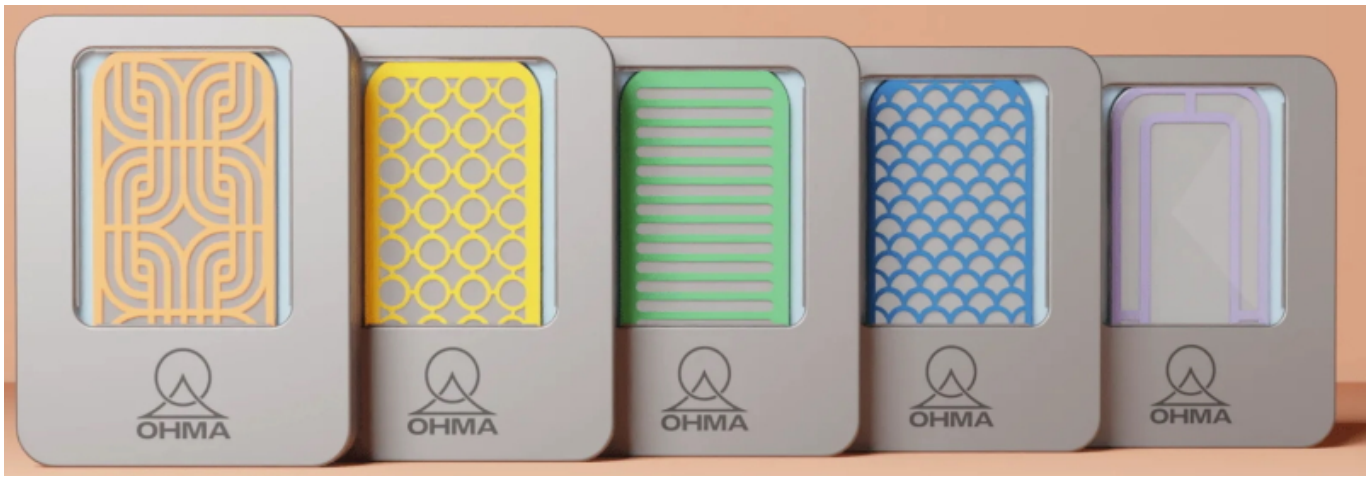
Ohma World Customizable Modular Microphones



Introducing Ohma World, a company founded by audio engineers and musicians who are passionate about creating products that allow people to express themselves in new and unique ways. Ohma World microphones are designed with a single mission: to give storytellers, musicians, and sound engineers the resources they need to capture beautiful sound effortlessly without obstacles or limitations.

Ohma World mics offer an unparalleled level of flexibility and control with swappable magnetic microphone grilles, which they call screens, each designed to alter the frequency response of the mic in various ways. Each screen imparts a distinct sound profile allowing you to shape your sound in new directions. Ohma World is the only company to offer fully customizable modular microphones, with each mic body and screen set hand-painted in-house at their workshop in Los Angeles. Choose between unique, ready-to-go, stock microphones, or use their online modular mic customizer to create something completely one-of-a-kind. From different colors and shades, to varied screens and sounds, you can freely explore creative depths and experiment with ease. Every Ohma microphone condenser capsule and ribbon transducer is hand-made in-house using only the finest materials.

The Ohma Condenser combines the best of mid-century capsule design with modern innovation to deliver a timeless sound that blends color with musical detail. It features Ohma’s signature edge-terminated capsule - lovingly christened “The Debby” - which is delicately tuned by hand, in-house, creating a remarkably smooth and extended frequency response rarely heard in microphones today. Classic FET circuitry paired with a vintage Cinemag transformer imparts an extra bit of depth and subtle saturation to your sound.

The Ohma Ribbon combines the classic characteristics of ribbon mics with added clarity and definition. You can expect smooth and forgiving transients without sacrificing details for an overall sound that feels full-bodied and balanced. The Ohma Ribbon, also tuned and tensioned in-house, features a custom Lehle

transformer and requires +48v phantom power, making it perfectly compatible with all types of recording set-ups, from humble interfaces and mobile recorders to world-class preamps and studio consoles.

With these modular mics in your arsenal, you can capture any source confidently and craft a sound that is uniquely yours - whether you’re a seasoned engineer or just getting started.

"At Ohma World, we believe everyone should have the opportunity to share their unique creative voice and express themselves through sound. We value diversity, inclusion, and accessibility in our products and company culture. That's why we've created modular microphones that are fully customizable, so you can find the right tool for your story - no matter who you are," said Charlene Gibbs, Co-founder of Ohma World.
