sE Electronics sE8 Supercardioid

The new sE8 Supercardioid brings the acclaimed sE8 small-diaphragm condenser platform to a focused supercardioid polar pattern, delivering exceptional clarity, excellent off-axis rejection, and the authentic, transparent sound the sE8 family is known for. Its highly consistent supercardioid pattern is ideal for applications where focused pickup and greater isolation are essential, including close-miking drums and percussion, acoustic guitar, orchestral instruments, and other solo sources.

Key Features include:

Phoca PDF

- Highly consistent supercardioid polar pattern
- Excellent off-axis rejection for greater isolation
- Natural, transparent sound with exceptional transient response
- Ultra-low self-noise and high SPL handling
- True condenser technology with handcrafted capsule design

sE8 Family Polar Pattern Options:

- Supercardioid – Focused pickup and excellent off-axis rejection for greater isolation and precise source capture.
- Cardioid – The versatile studio standard for acoustic instruments, drum overheads, piano, vocals, and general-purpose recording applications.
- Omnidirectional – Natural, open capture from all directions with no proximity effect, ideal for room microphones, orchestral recording, and ensemble applications.

Available Configurations:

- Single microphones
- Factory-matched stereo microphone pairs
- Individual capsules
- Factory-matched capsule pairs
