UAD Topline Vocal Tune

Universal Audio Inc. (UA), a company with expertise in audio production tools, announces the UAD Topline Vocal Tune, a vocal pitch correction plug-in now available for Apollo and UAD hardware. Built for modern vocal production, Topline Vocal Tune lets musicians and producers pitch correct and reshape vocals in realtime while they record. This means singers can hear their vocals perfectly in tune through headphones without any distracting delay.

Previously only available natively, UAD Topline Vocal Tune now includes both Native and DSP versions with purchase. Users can seamlessly switch between them in the LUNA DAW with all plug-in settings preserved. The Apollo DSP version delivers all the features of the UAD Native version, even in larger sessions and at any DAW buffer size. It’s the only UAD plug-in capable of realtime pitch-shifting, with effects ranging from transparent correction to hard-tuned sounds.

Key Benefits

- Realtime Pitch Correction. Hear tuned vocals through headphones with near-zero latency.
- Shift Mode. Record or monitor with creative Pitch shifting and Formant

Phoca PDF

controls.
- Live Performance Ready. Take Topline from the studio to the stage with Apollo.
- Native and DSP Versions. Switch between UAD Native and Apollo DSP plug-in versions in LUNA, with all your settings preserved.
- Natural Vocal Settings. Preserve nuance and character.
- Key Finder. Lock to any key and scale automatically to spend less time on setup.

UAD Topline Vocal Tune is available at uaudio.com and through authorized UA retailers starting September 8, 2026.
